

New River Valley Park-and-Ride Study - Through phase 1 of this project, several general locations in each of the counties/city in the Planning District were suggested as candidates for location of park-and-ride facilities. The purpose of this listing was not to declare that all of the sites require park-and-ride facilities. However, if localities and/or VDOT should be interested in park-and-ride facility development in the future, the phase 1 list provides a starting point for deliberation. The phase 1 report includes a description of the “park-and-ride” and “travel demand management” concepts. The phase 1 report also includes a recommendation that a regional rideshare program be developed for the New River Valley.

The locations suggested in phase 1 largely include the vicinity of primary highway junctions and interstate interchanges. In phase 2 of this effort, six of the phase 1 locations were selected for further study. Parcel information was collected for the vicinity of these junctions/interchanges. The phase 2 report includes tabular summaries of the parcel information and vicinity parcel maps.
